Education

The University of Southern Mississippi — Hattiesburg, MS
Bachelor of Science in Computer Science and Mathematics (GPA: 3.762) — *Aug. 2024 – May 2028*

Technical Skills

Programming: Python, JavaScript, TypeScript, Go, C/C++, SQL, HTML/CSS
ML / AI & Data: pandas, NumPy, Matplotlib, scikit-learn, PyTorch, RAG, LLM workflows
Web, Tools & DB: React, Next.js, Flask, FastAPI, Node.js, REST APIs, Git, Docker, PostgreSQL, SQLite
Cloud & Infra: GCP, Vertex AI, Google ADK, MongoDB, Daytona
Product: Requirements gathering, roadmap planning, cross-functional collaboration, user research, prioritization

Experience

Product Lead & Software Developer — Nov 2025 – Present
Institute for Advanced Analytics and Society — *Hattiesburg, MS*

- Directed product strategy for a NOAA-funded enterprise AI research platform, aligning the roadmap with researcher and stakeholder needs to turn complex datasets into ROI-focused analysis on a Next.js and Go stack with MongoDB.
- Defined requirements for multi-step agent workflows built on Google's Agent Development Kit and Vertex AI, scoping ambiguous research problems into features that supported scalable LLM orchestration.
- Prioritized the technical roadmap for containerized Docker sandbox environments on GCP using Daytona, balancing reproducibility against engineering effort to keep the platform reliable as usage grew.
- Streamlined the release process by building CI/CD pipelines, cutting manual deployment effort by a significant margin and accelerating time to ship new features.

Product/Software Engineer Intern — May 2026 – Aug 2026
AI Business Consulting Group (AIBCG) — *Leander, TX*

- Gathered requirements directly from three client businesses (Veteran Realty, Parinama Consulting, and Parinama Academy) to scope and ship AI-powered customer service agents, prioritizing the features with the highest impact on daily operations.
- Reduced manual customer response workload by approximately 30% by designing multi-step workflows around real user pain points, validated through direct client feedback.
- Built a single reusable agent framework deployed across all three clients, cutting setup time for each new business use case and proving the product could scale beyond one customer.

Product/Software Engineer Intern — May 2025 – July 2025
Lavner Education — *Dallas, TX*

- Partnered with internal stakeholders to define dashboard requirements and user flows before development, building full-stack internal applications with React, Node.js, and Python.
- Designed REST APIs connecting React dashboards to backend services, delivering real-time monitoring that directly shaped day-to-day operating decisions.
- Converted raw device telemetry and log data into automated pipelines and visual insights, reducing troubleshooting time for the operations team.

Projects

Clinic Reconciliation Engine | *Python, FastAPI, PostgreSQL, React, scikit-learn, Healthcare AI*

- Designed a healthcare reconciliation product that compares and normalizes clinical records across 3 disconnected EHR systems, starting from the workflow gaps clinics actually run into.
- Built ML-assisted matching for duplicate patient records, reaching 95% matching accuracy on test data.
- Delivered API-driven search and analytics so non-technical staff could run reconciliation without needing to understand the backend.

NDR Detection Engine | *Python, pandas, scikit-learn, Zeek, Isolation Forest, ML*

- Built a network detection and response engine that analyzes Zeek logs and behavioral features, including interval consistency, byte distribution, and after-hours activity, to flag anomalous traffic without hardcoded thresholds.
- Reached over 90% detection rate at under 5% false-positive rate, with alert logic that explains each detection for faster triage.

Extracurriculars

Organizations: WISE, Grace Hopper, Girls Who Code, Society of Women Engineers (SWE), Rewriting the Code, WiCyS
Honors : President's List (Fall 2024, Spring 2025), Dean's List (Fall 2025, Spring 2026)
